ABSTRACT

This report discusses the effort put forth by the University of California (UC) at Davis and California's community colleges to reinvigorate and strengthen transfer student academic success. The report offers information on the Transfer Opportunity Program (TOP), Transfer Admission Agreements (TAA), and Transfer Articulation Agreements that exist between UC Davis and certain California community colleges. The TOP supports transfer students by placing UC admission advisors at nine community colleges to help aid the students' transition from community college to a four-year institution. UC Davis also has transfer agreements with 56 California community colleges. The report provides statistics on transfers entering UC Davis from fall 1984 through spring 1999. Findings show that approximately 36% of new undergraduates at UC Davis enter as transfers. Three-fourths of these transfers are from community colleges. About one-third (12%) of the transfers are from under-represented ethnic groups. Transfer enrollment figures are stated to have dropped steadily over the last four years. Overall, 80% of the transfers entering in fall 1984 had graduated by the end of spring 1999. The report includes 7 charts and 9 tables. (MKF)

Enrollment and Graduation Patterns of Undergraduates Transferring to UC DAVIS: 1984-1999

BACKGROUND

The Master Plan for Higher Education envisions a complementary relationship between the University of California and California Community Colleges: UC selectively admits the top one-eighth of California's high school graduates; community colleges admit all adults, thus providing access to postsecondary education for those who either cannot or choose not to enter a four-year institution after high school. In 1997 the heads of both institutions signed an agreement to improve access: Enhancing Student Transfer: A Memorandum of Understanding Between the California Community Colleges and the University of California. This MOU affirms both systems' resolve "to work together to reinvigorate and to strengthen transfer student academic success." Toward this end, UC Davis has redoubled its efforts to encourage transfer to the campus:

Transfer Opportunity Program (TOP)

Initiated in 1983, TOP provided a model for the statewide system of community college transfer centers; TOP currently supports admissions advisors at nine community colleges. Using funds made available recently under the MOU, UC Davis plans to expand TOP by increasing the number of participating community colleges in Northern California.

Transfer Admission Agreements (TAA)

In 1986 UC Davis pioneered the use of the Transfer Admission Agreement to address student complaints about the lack of guidelines for course work to be taken in preparation for transfer. Students signing a TAA get a commitment from UC Davis that completion of specified course work with a required GPA guarantees admission for a particular quarter.

Transfer Admission Agreements benefit students, the community college and the campus. By concentrating on a specific set of courses, students can reduce the time spent preparing for transfer. The campus gains by enrolling students better prepared

for upper division course work; such preparation should improve student performance and reduce the time needed to complete a degree.

The proportion of transfers entering with TAAs has increased from 16% (1987-88) to 40% (1998-99), while the numbers more than trebled (202 to 716). A higher proportion of TAA students actually enroll than applicants admitted by other means; 62% of TAA holders in 1998-99 enrolled, compared with 50% of other advanced standing applicants.

This program now includes 56 community colleges. UC Davis plans to use funds made available by the MOU to extend the program to more community colleges in Southern California

Transfer Articulation Agreements

UC Davis faculty advise prospective transfer students to concentrate on taking courses that prepare them for upper division work in their majors. In the academic community, articulation describes the courses at one institution that are transferable to another institution and how those courses may be

applied for credit. There are two types of agreements that describe course articulation:

- (1) Transfer Course Agreements identify community college courses that are generally transferable to the UC and/or CSU systems.
- (2) Articulation Agreements are faculty-approved contracts that specify how courses taken at the community college can be applied to specific academic goals at the University.

Students and counselors who consult these agreements will know how to prepare for Davis majors.

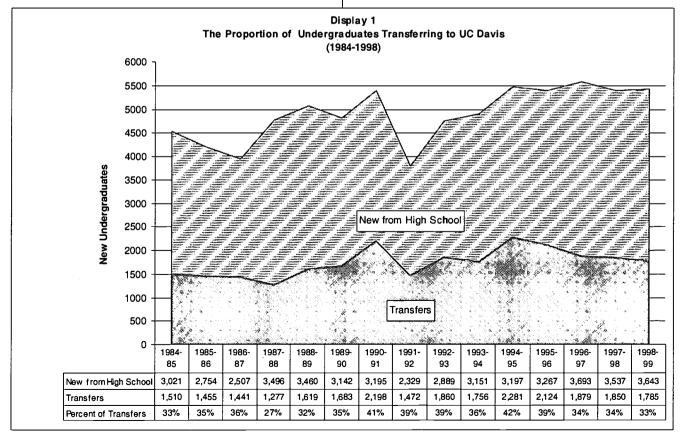

All course agreements are available through ASSIST (Articulation System Stimulating Interinstitutional Student Transfer), California's official statewide repository of articulation information. Available on the World Wide Web (www.assist.org), ASSIST offers students easy access to a computerized data base that lists statewide articulation agreements. ASSIST, a cooperative effort among UC, the California State University, and the California Community Colleges, helps students determine if they will receive credit for courses they have already taken and how those courses will apply to specific academic goals.

Scope of Report

This report describes transfers entering UC Davis from Fall 1984 through Spring 1999. *Transfers* enter with at least sophomore standing (more than 45 transfer units), or are identified by Undergraduate Admissions as advanced standing, or their source school is not a high school. Students not meeting these criteria are called *new from high school*.

For purposes of comparison, domestic ethnic groups are broadly aggregated: *Expanded Asian* (includes East Indian/Pakistani & Filipino, as well as Chinese, Japanese, Korean, Pacific Islander, Vietnamese & Other Asian students); *Student Affirmative Action* (students from groups historically underrepresented in UC: American Indian, Black, Chicano and Latino); and *Expanded White* (students who mark White, Other or leave Ethnicity blank).

The report uses academic year (fall through spring) totals. References to a particular year signify a full academic year (e.g., "1989" designates Fall 1989 through Spring 1990). Data come from the Composite Undergraduate File, a longitudinal database of undergraduates and updated from Student Record System files through Spring 1999.

Ų.

Transfer Facts: 1984-99

- Over a third (36%) of new undergraduates enter as transfer students, but their numbers have fallen over the past four years.
- About one-third of SAA entrants (i.e., Black, American Indian, Chicano & Latino) enter as transfer students; 12% of transfers are SAA.
- Transfer patterns differ little by gender.
- Beginning with 1991 transfer entrants, 80-88% entered with 84 or more transferrable units.
- Three-fourths come from community colleges.
- Eighty percent of those entering between 1984-1995 graduated by the end of Spring 1999.
- Transfers with TAAs are slightly more likely to graduate (82%) than those without (80%).

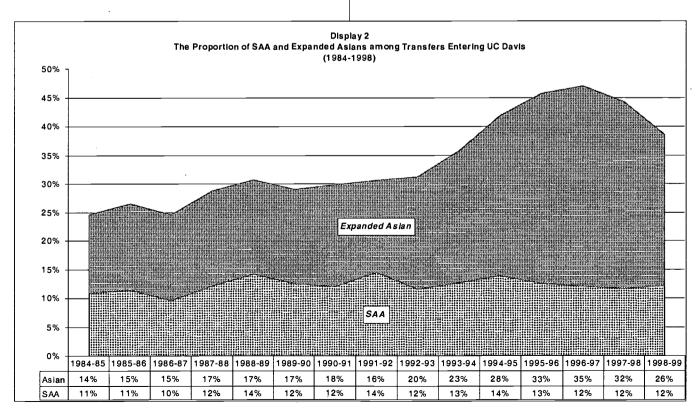

The Undergraduate Population

When compared to 1984, the number of new undergraduates entering UC Davis in 1998 increased 20% overall, while transfers increased 18% (see Table 1). From 1984 to 1998 over a third (36%) of new undergraduates entered as transfer students (26,190). Transfers have ranged as high as 42%

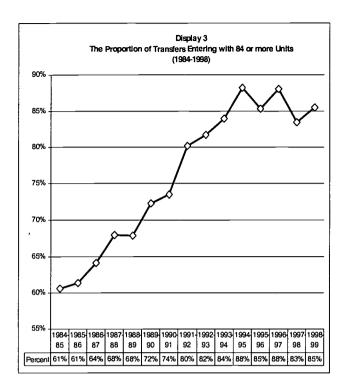

(1994) of entrants, but recently dropped to 33% (1998). As seen in Display 1, the number of transfers has fluctuated substantially, from a low of 1,277 (1987) to a high of 2,281 (1994). The most recent enrollment (1,785) is down from the four preceding years and close to the 15-year average (1,746).

Ethnic Background

Although 36% of all undergraduates entering since 1984 were transfers, only 32% of SAA and 29% of Expanded Asian students were transfers; the largest proportion (39%) occurs among Expanded Whites. The proportion of non-White (i.e., Expanded Asian and SAA) transfer students rose from 25% (1984) to 47% (1996) but subsequently fell to 39% (see Display 2). Most of this growth came from the Expanded Asian groups, whose proportions rose from 14% (1984) to 35% (1996) before dropping to 26%. By contrast, the proportion of SAA transfers grew little, going from 11% (1984) to 14% (1994) before dropping to 12%. As shown in Table 1, the combined number of Expanded Asian and SAA transfers increased 185% (from 371 to 688) while Expanded White transfers decreased 4%. Since 1996. Expanded Asian transfers plummeted from 703 to 471; SAA transfers fell from 227 to 217; Expanded White enrollment rose from 997 to 1,097.

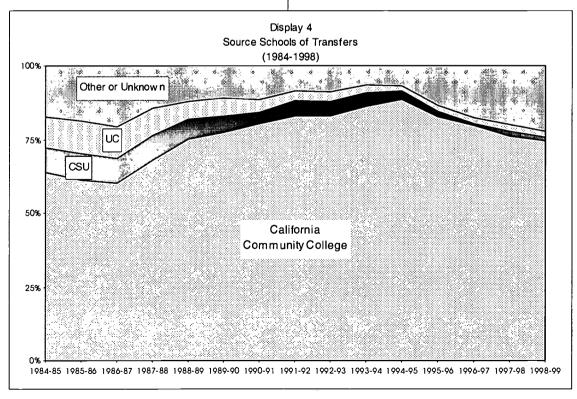

Enrollment within individual ethnic groups (Table 2) illustrates the flux experienced by the entire campus. Enrollment for most SAA groups peaked in 1994 or 1995. In July 1995, the UC Board of Regents adopted SP-1, which prohibits use of "race, religion, sex, color, ethnicity or national origin as criteria for admission." The Regents' policy change,

(reinforced by the passage of Proposition 209) did not go into effect until January 1997. Chicano transfers increased from 65 to 143 (1994), then subsequently fell to 100; Latino enrollment grew from 33 to 74 (1995), then dropped to 45. The number of American Indian transfers remained relatively small, fluctuating between 10 (1984) and 35 (1990), before falling to 22. Black transfers dropped decidedly; numbering 56 in 1984, they rose sporadically to 77 in 1994 but fell to 50 in 1998. *Other Asian*, together with the category *Vietnamese* (introduced in 1996), grew from 40 (1984) to 259 (1995), but has since fallen to 126. Filipino transfers nearly tripled from 27 to 75 (1996), then fell to 57, while East Indian went from 9 to 56 (1995), then down to 32.

Entering Class Level

As envisioned in the *Master Plan*, most students transfer as juniors (Table 3). However, in 1993 UC Davis adopted a new definition of class level, going from Academic Class Level to FTE Class Level. Junior status, previously defined as *84.0-134.9* transfer units, is now defined as *90.0-134.9* units. The effect of this change was to reduce the number of students defined as juniors, including those previously admitted with junior status.

Accordingly, this report includes an alternative category (84 or more units) that roughly captures those

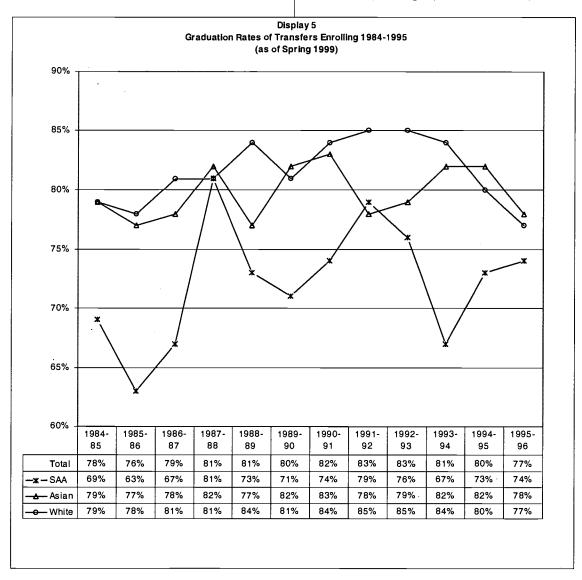

students admitted as juniors and seniors under the old definition. Prior to 1991 about one-third of all community college transfers entered with fewer than 84 units. Beginning in Fall 1995, admission selection procedures gave priority to transfers who had completed 90 or more units. Since 1991, approximately 85% of all transfers entered with 84 or more units. The proportion of transfers entering with 84 or more units grew steadily from 61% in 1984 to 85% in 1998 (Display 3; Table 3).

From 1984 to 1999, 32% of transfers (8,315) entered as sophomores, but their proportion declined to 14% in 1998, reflecting increasing numbers of junior transfers. Prior to 1991 the proportion of transfers entering as freshmen averaged 10% but has since fallen to about 6%. From 1982 through 1991 the proportion of senior-level transfers averaged 3%, but it has since risen to 10%.

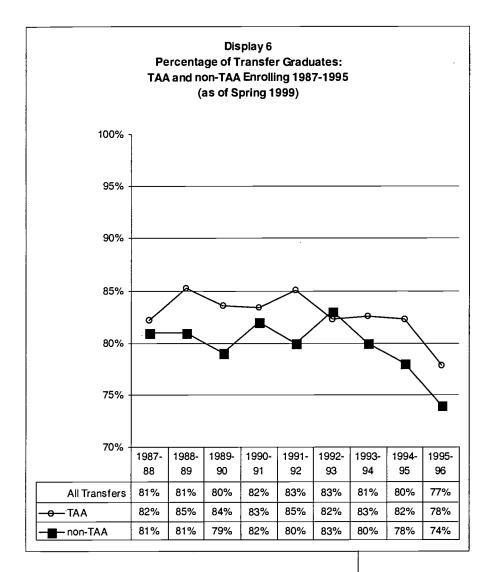

Although 77% of all transfers enrolling during this period entered with 84 or more units, several ethnic groups fall below this average. Blacks (61%), American Indians (71%) and Pacific Islanders (72%) were least likely to have attained this status prior to transferring (see Table 4).

Source Schools of Transfers

Campus efforts in the past to attract community college students were successful. The proportion of transfer students coming from community colleges—77% overall during this period—reached a high of 88% in 1994 (Display 4). Community college transfers increased from 960 (1984) to an unprecedented 2,018 students (1994), more than all transfers entering in any year before 1990 (Table 5). About 24% of all new undergraduates in 1998 came from a community college (Tables 1 and 5). Nonetheless,

Transfer students from the Expanded White group entering from 1984 through 1995 graduate at rates (82%) slightly above those for all transfers (80%), while the Expanded Asian group graduated at this same rate. By comparison, only 73% of SAA students graduated (Display 5).

Past studies indicate a relationship between graduation rates and academic preparation prior to transfer to the campus. Through the Transfer Admission Agreement program, campus representatives work closely with community college students prior to entrance to encourage adequate preparation for upper division studies. Among transfers entering Fall 1987 through Fall 1993 who had graduated by Spring 1999, one-third had participated in this program (see Table 7); the overall graduation rate of these 5,556 TAA students (82%) slightly exceeded that of nonparticipating transfers (80%).

the number of community college transfers has dropped 34% since 1994, driving the overall decline (33%) in transfer enrollment.

Transfers from other institutions decreased both relatively and absolutely from 1984 onward. In 1998, only 22 transfers came from within the University of California, 35 from California State University campuses, and 399 from other schools; these students comprise 26% of transfers, down from 36% in 1984.

GRADUATION RATES

Four-fifths of transfer students earn baccalaureate degrees at UC Davis; 80% (16,579) who enrolled from 1984 through 1995 graduated by the end of Spring 1999 (Table 6). As Display 5 shows, graduation rates increased from 78% (1984 entrants) to a peak of 83% (1991 and 1992 entrants). For those enrolling in 1995, graduation rates (77%) will rise as enrolled and returning students complete degrees.

These results, as shown in Display 6, suggest that TAA students may be better prepared than their non-TAA peers; such preparation can partially be attributed to the direction they received through the Transfer Admission Agreement program.

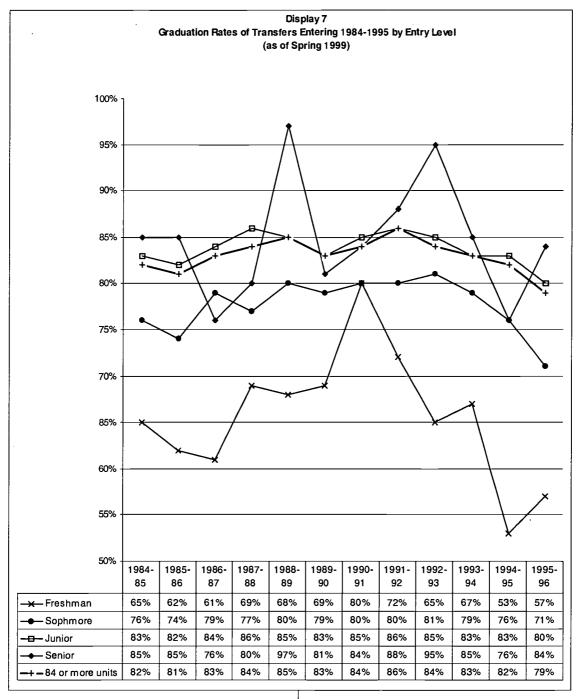

Graduation Rates by Level at Entrance

Among students transferring with 84 or more units from 1984 through 1995, 83% had graduated by the end of Spring 1999 (Table 8); their graduation rates vary over the period, peaking at 86% for 1991 entrants (Display 7). They graduate at substantially higher rates than freshman (67%) and sophomore (78%) transfers. Transfers with 84 or more units already have a substantial investment in their education when they enter and are probably more mature than those with less college experience.

Students new from high school who entered Fall 1984 through Fall 1993 and who persisted 7 or more

quarters (to approximately junior level) graduated at even higher rates (as high as 92% among Fall 1986 & 1988 entrants) than transfers with 84 or more units (83% overall). This difference is not unexpected; students who persist to the junior level have already adjusted to the unique academic and social environments of UC Davis and have probably formed strong personal ties to the campus; those who did not have probably already left.

Graduation Rates by Source School

The type of institution attended before transferring does not appear to influence overall graduation rates. Among transfers entering from 1984 through 1995 (Table 9), 83% of those transferring from UC, 82% from CSU and 80% from CCC campuses had graduated by the end of Spring 1999. Only those transferring from Other (77%) or Unknown (67%) schools had lower rates.

¹ The Vietnamese ethnic category was added in 1997; most students previously appeared under Other Asian.

Entry

²Expanded Asian includes East Indian/Pakistani and Filipino, as well as Chinese, Japanese, Korean, Pacific Islander, Vietnamese and Other Asian students.

³Expanded White includes students who mark White, Other or leave Ethnicity blank.
